

Pokročilé spracovanie obrazu

# Detekcia áut na križovatke

Richard Dominik  
František Tomana

**FMFI UK 2020**

# Dataset

- Github repozitár [traffic-surveillance-dataset](#)
- [2014 - Ko-PER Dataset - Multiple Camera / Multiple Laser](#) všetky sekvencie
- 35 obrázkov bez Ground truth

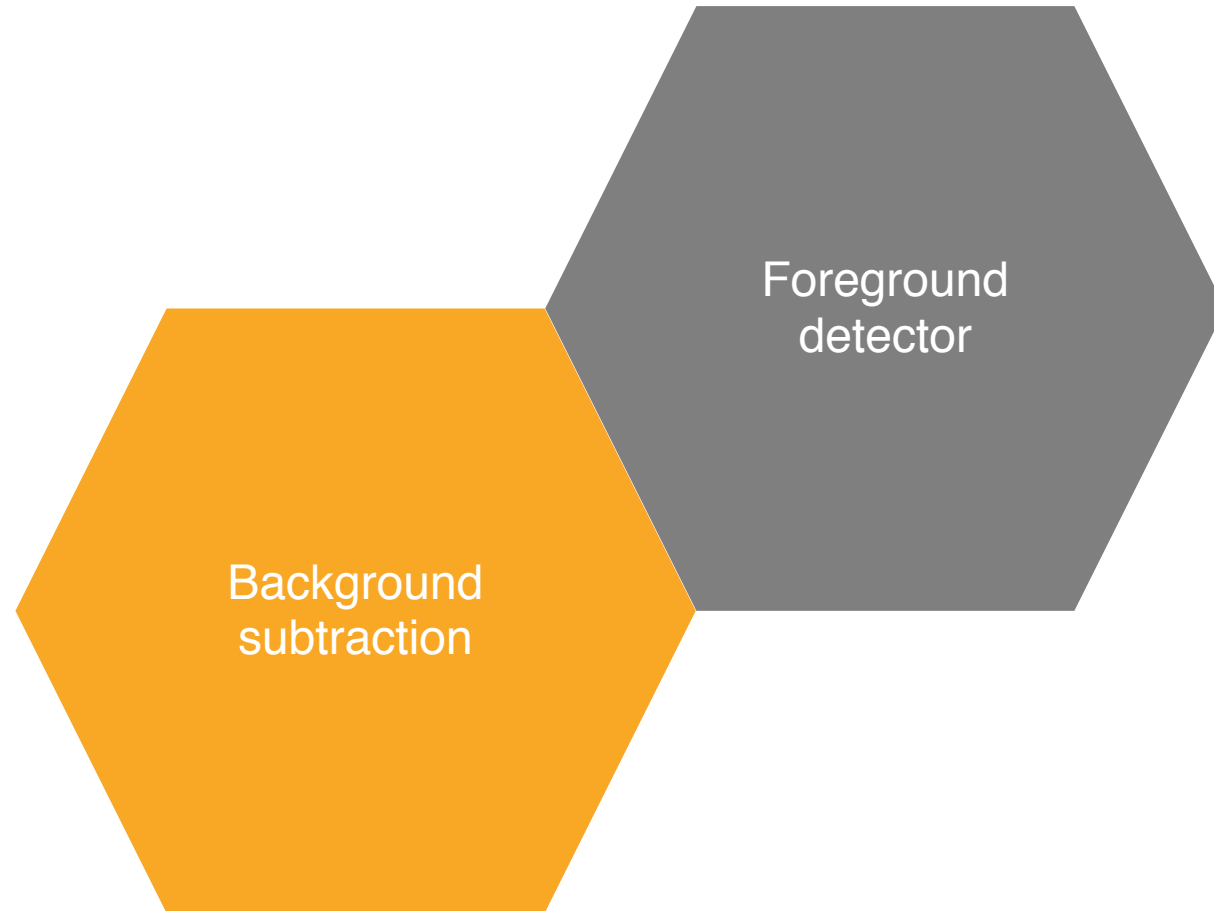

# Ground truth

- pomocou aplikácie Image Labeler
- celý dataset (35 obrázkov)
- .mat súbory s pozíciami bounding boxov

# Metódy

# Foreground detector

- **vyžaduje** viacero obrázkov (prechádzame celý dataset)
- počíta a vracia masku popredia
- gaussovský filter na zníženie šumu
- dilatácia na masku (ŠE štvorec veľkosti 6)
- **vision.BlobAnalysis** pre bounding boxy (**minimalBlobArea 300**)
- počet bounding boxov = počet detegovaných áut

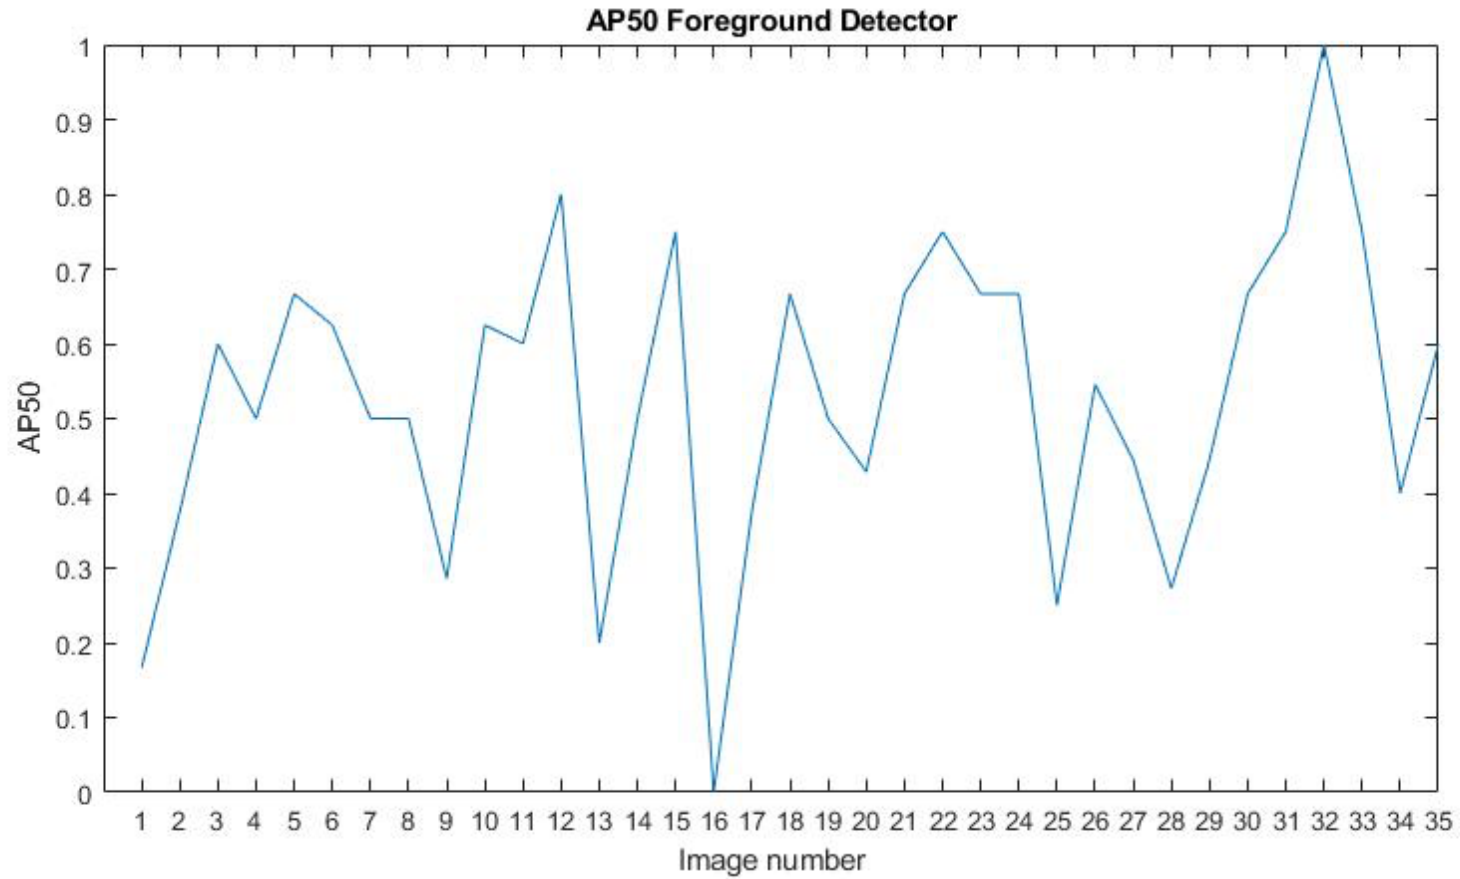

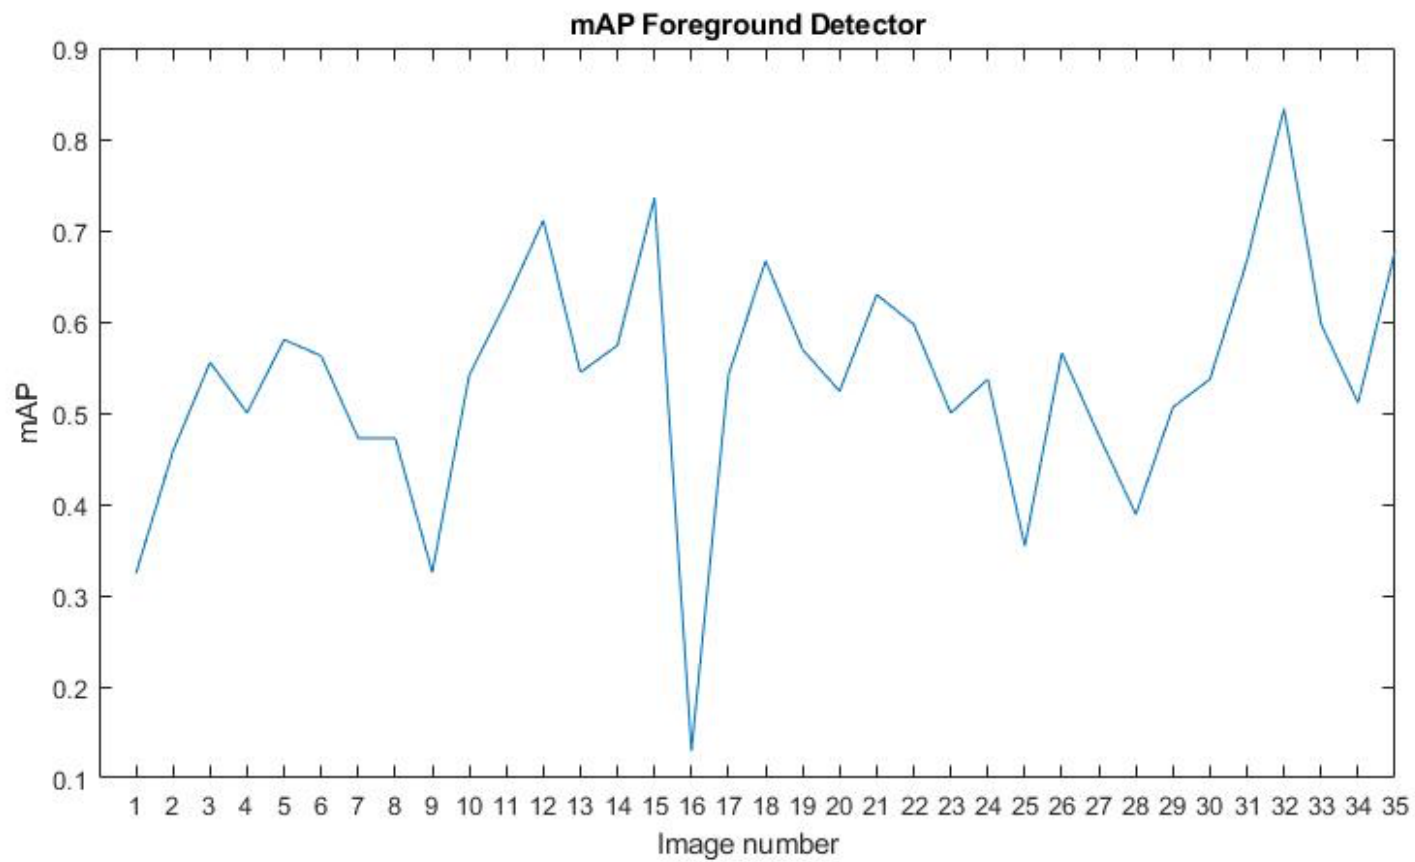

# AP50 metrika

52.96%

# mAP metrika

53.68%

# Background subtraction

- **nevyžaduje** viacero obrázkov
- výpočet pomocou formuly **abs(selectedImage - backgroundImage)**
- prahovanie **> 0.22 = 1**
- **bwareaopen** (odstálenie malých objektov)
- **zatvorenie** (ŠE štvorec veľkosti 7)
- **vision.BlobAnalysis** pre bounding boxy (**minimalBlobArea 300**)
- počet bounding boxov = počet detegovaných áut

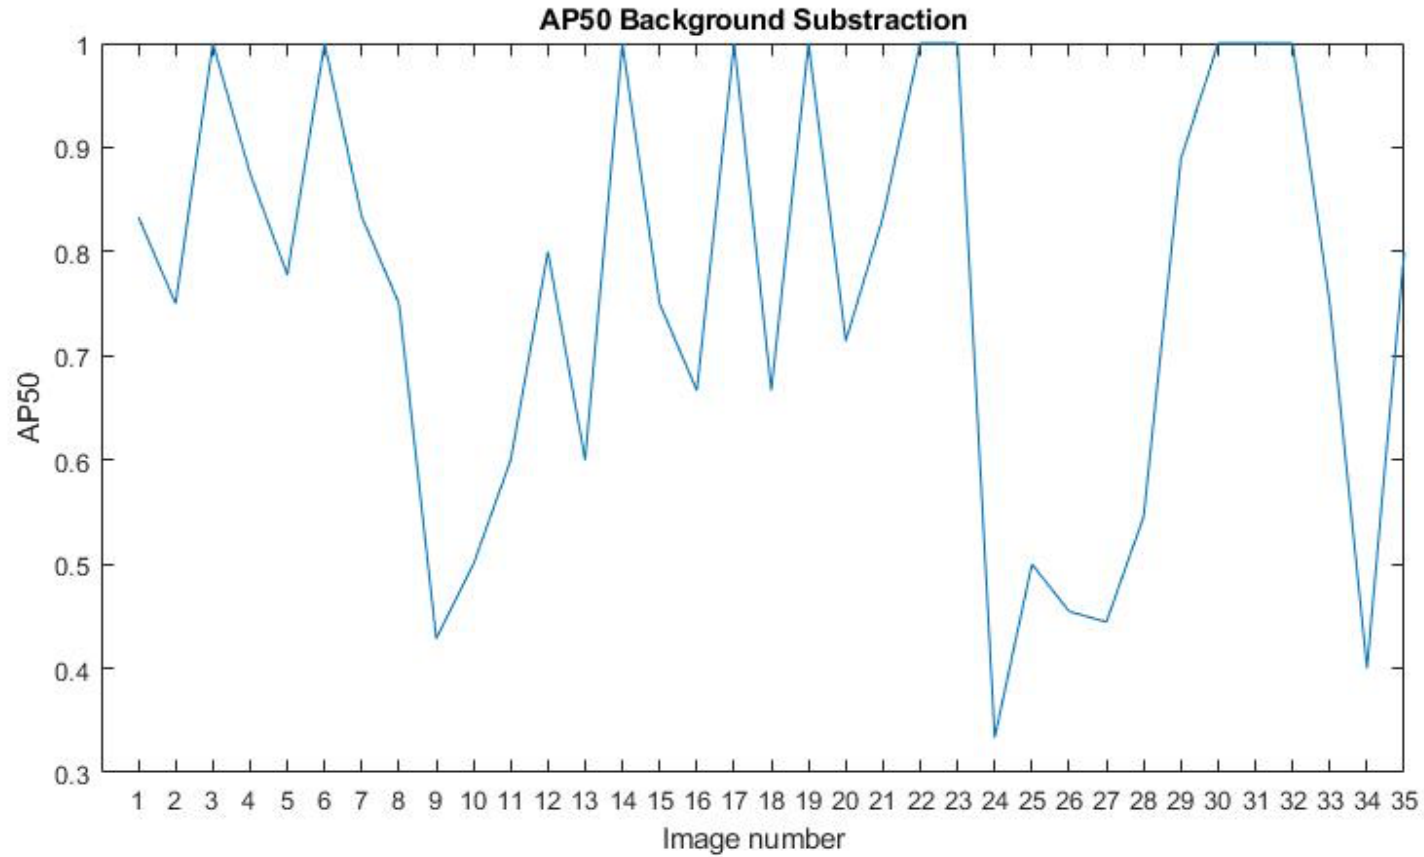

# AP50 metrika

75.70%

# mAP metrika

66.77%

# Vyhodnotenie

Foreground detector
